

The Texas Immunization Registry (ImmTrac2)

Keeping up with vaccine records is now easier than ever with the Texas Immunization Registry, ImmTrac2. The online registry consolidates immunization records from various administering providers including large chain pharmacies, private and public providers.

Benefits

By enrolling in the secure and confidential ImmTrac2, pharmacists can:

- Proactively identify individuals needing a vaccine.
- Evaluate vaccines due or past-due according to ACIP recommendations or Texas school and child-care requirements.
- Assess individual immunization records to avoid over-vaccinating or missing opportunities.
- Offer individuals their official immunization record.
- Eliminates the cost to individuals requesting their immunization records who have transferred between healthcare providers.

Registry Consent

Persons already registered in ImmTrac2 must sign an adult consent form when they turn 18 years old. The registry secures immunization records until consented individuals turn 26 years old. However, if an adult consent form (EF11-13366) is not submitted to the Texas Immunization Registry after age 18 and by their 26th birthday, all immunization records are deleted.

Forms and Documents

Consent forms for minors (under 18 years of age to be signed by parents or guardians) and adults (18 years of age and over) can be found in English and in Spanish by visiting the ImmTrac2 website at ImmTrac.com and selecting FORMS in the menu bar near the top of the screen.

For questions, additional information, or to sign up for access to ImmTrac2, visit ImmTrac.com
